

## Violence reduction data in ED

Collection, processing, use and value

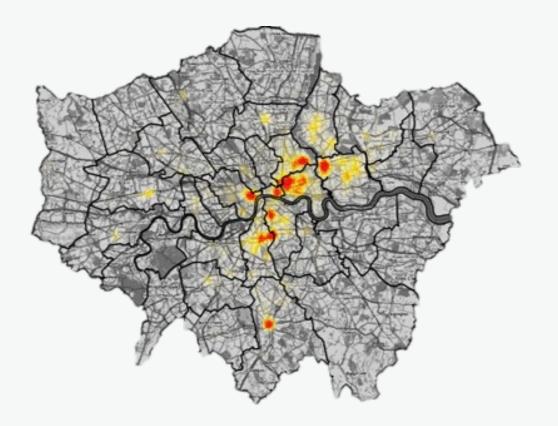

Presented by: Michael Cheetham | National VR Data Manager | michael.cheetham@nhs.net RCEM ISTV SOP Launch Event 6 March 2024

#### Violence is differently recorded by police and health

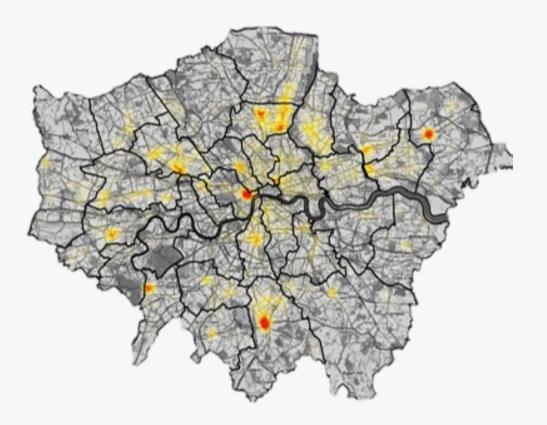

# ... this results in different geographical understandings of violence

Emergency department data

Police data

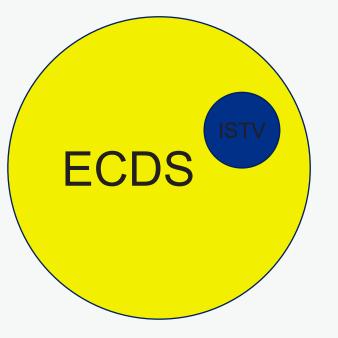

## **ISTV** is being integrated into ECDS

#### This provides a rich source of insight into violence seen in UEC

#### **Emergency Care Data Set v4**

ISTV data items All other ECDS items including

- Place of injury
- Injury intent
- Injury mechanism
- Injury activity status
- Injury activity type
- Drug and alcohol involvement
  Linkage to other health data
  Available to ICBs and NHSE (mostly)

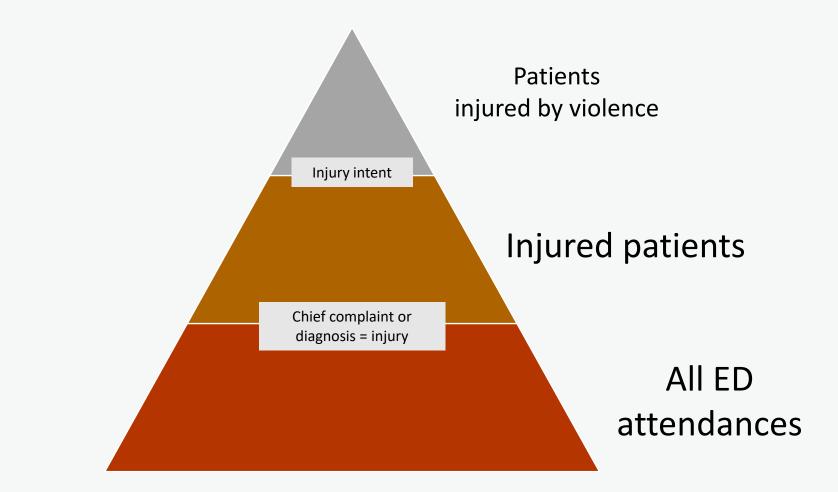

#### **Information Sharing to Tackle Violence**

- Location
- Time & date of assault
- Time & date of arrival at ED
- Mechanism
- ED Site

Local data sharing

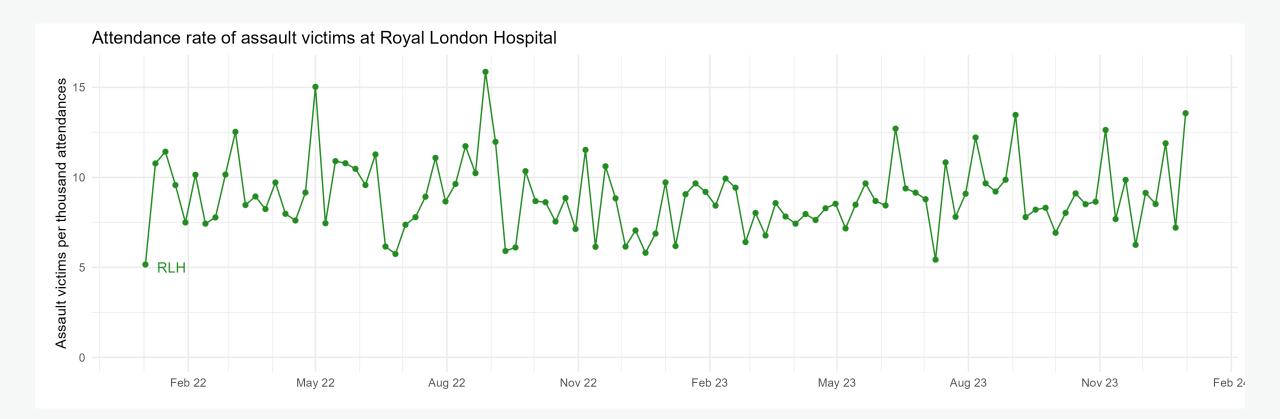

# Patients who have been assaulted are a fraction of those attending ED

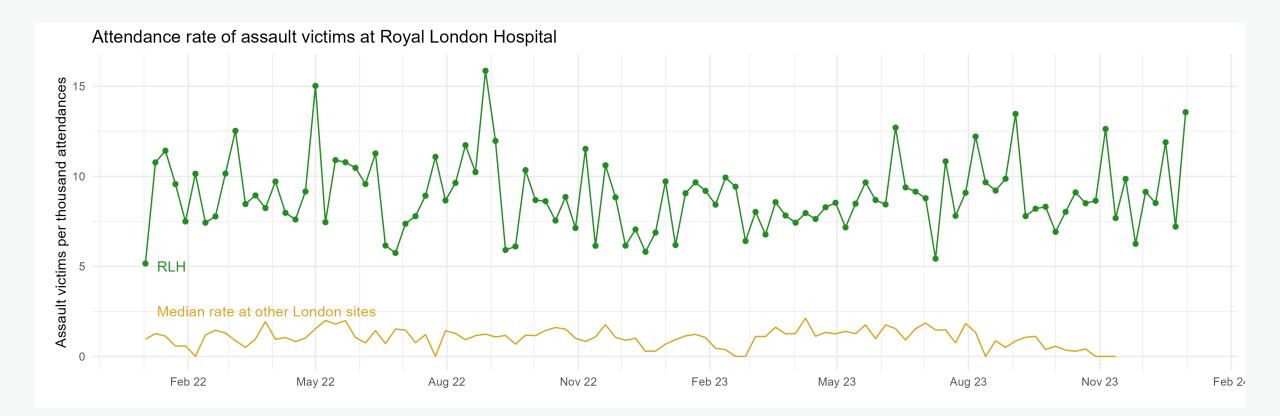

#### A deep dive at Royal London Hospital

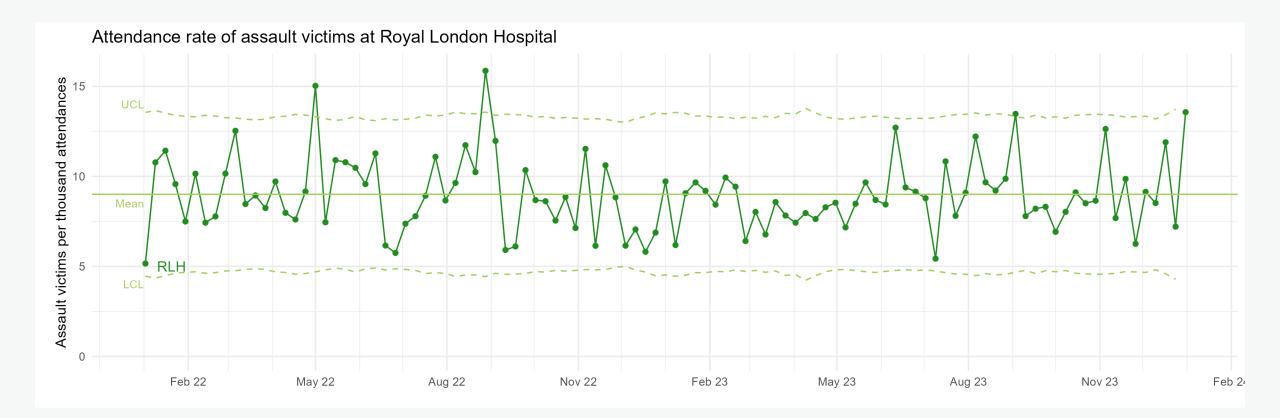

#### **RLH has consistently recorded assaults**

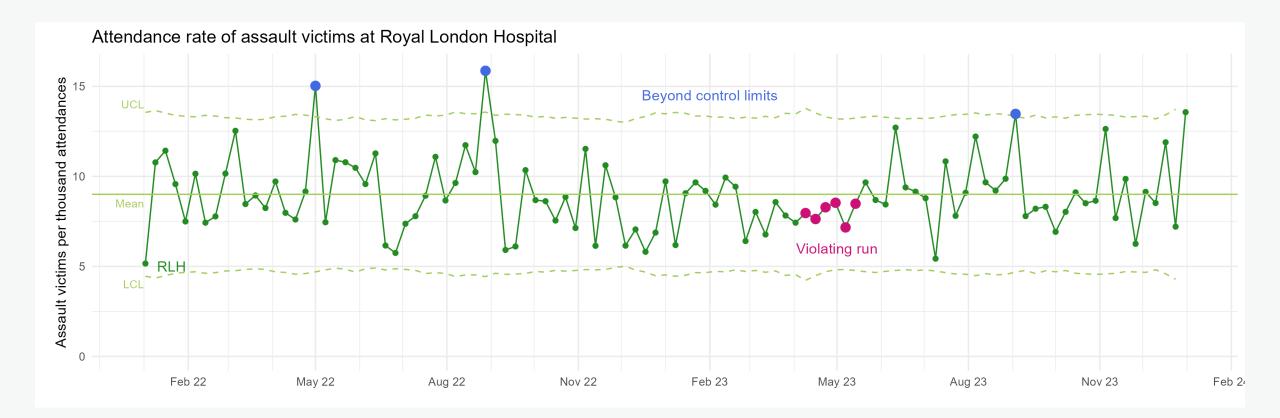

#### ... at a higher rate than other London sites

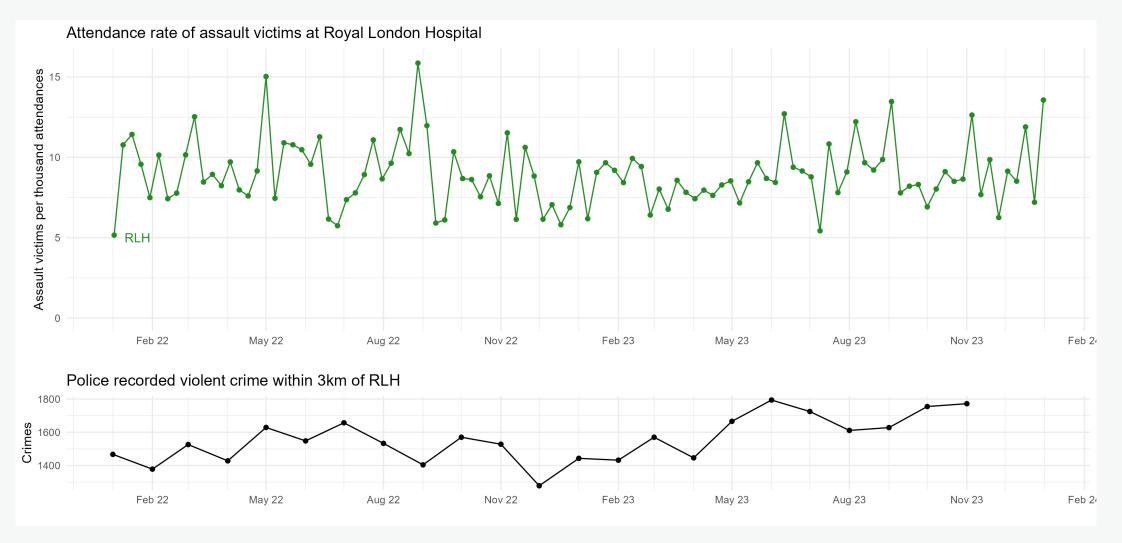

#### ... anomalies can be identified for investigation

#### ... anomalies can be identified for investigation

#### ... and recording is decoupled from local reported crime

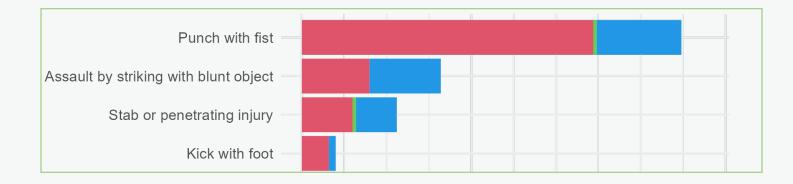

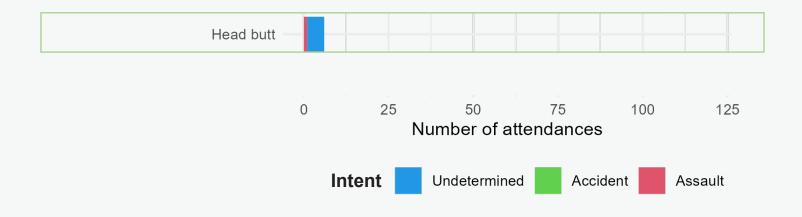

# There are tens of thousands more assaults local to RLH than are seen in the ED

- 30-60% of assaults are reported to the police
- 1-2% of UEC activity is as a result of violence
- Royal London Hospital ED accounts for 3.2% of London UEC activity
- There were 448 thousand attendances at Royal London ED in 2021-2023
- There were 453 thousand violent crimes reported in London in 2021-2023

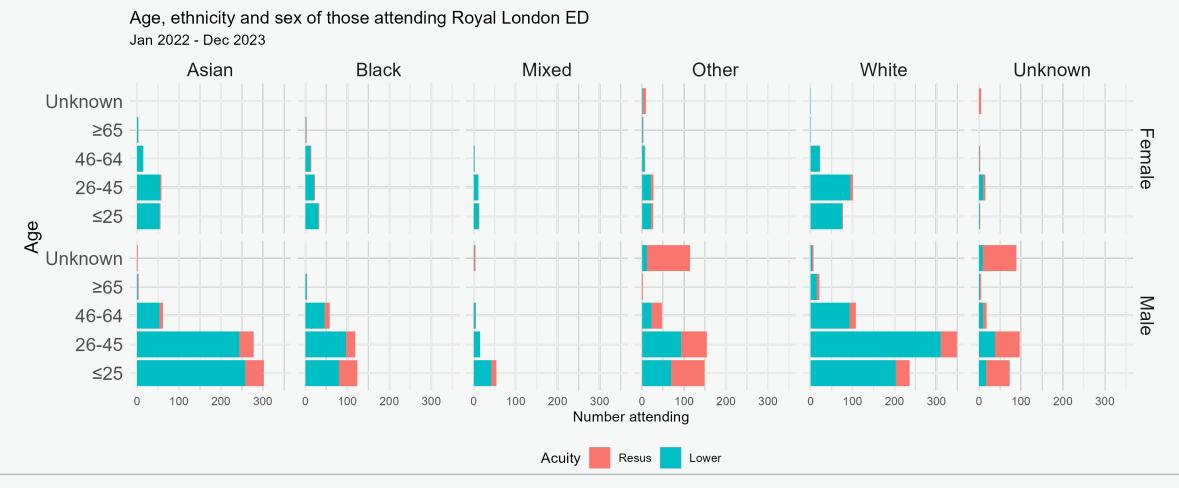

# It is likely that not all injuries from assault are being recorded at RLH

# It's not perfect data, is it useful?

# There are strong patterns around age, sex, ethnicity and acuity

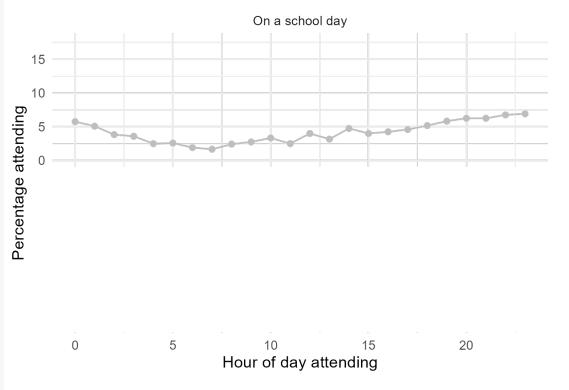

# The local population need at RLH includes those who are homeless

16% of assault related attendances at RLH are from people recorded as homeless

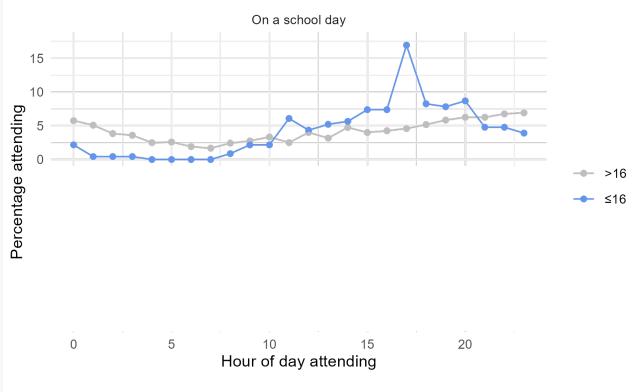

Health E1 provides a specialised service dedicated to the needs of people who are street homeless and those in temporary or hostel accommodation in the borough of Tower Hamlets Victims of assault at RLH over 16 years old attend most commonly in the early hours of the morning Time of attendance of victims of assault Jan 22-Dec 23 at RLH ED

#### But school age victims of assault at RLH most commonly arrive late afternoon

Time of attendance of victims of assault Jan 22-Dec 23 at RLH ED

#### Assault location description

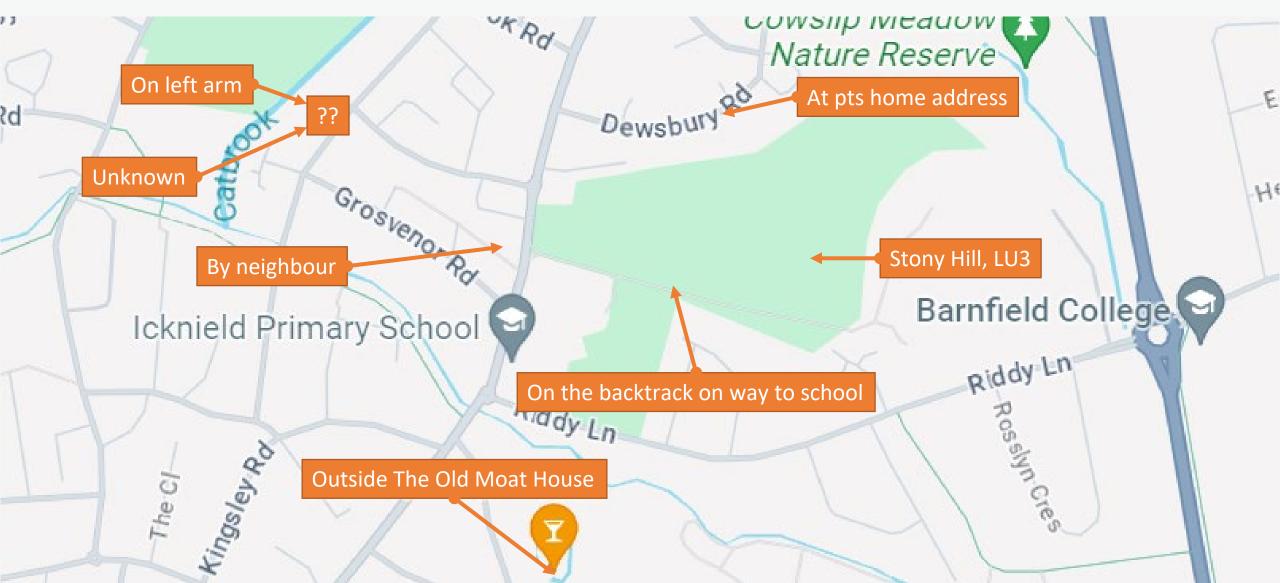

#### Location of assault can be tricky to capture

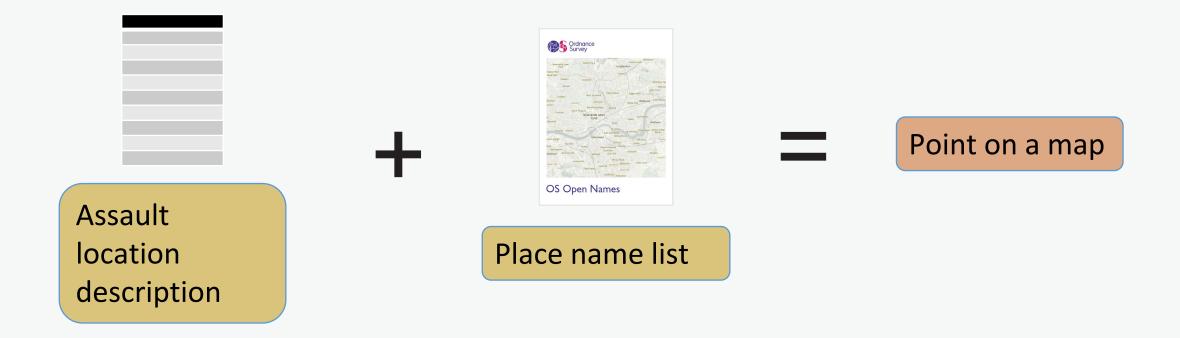

- Willingness of patient
  - Distrust of authority
  - Fear of reprisals
- Ability of patient
  - Intoxicated
  - Unconscious
  - Local knowledge
  - Language
- Ability of ED
  - Time & capacity
  - Clinical system

Free text capture

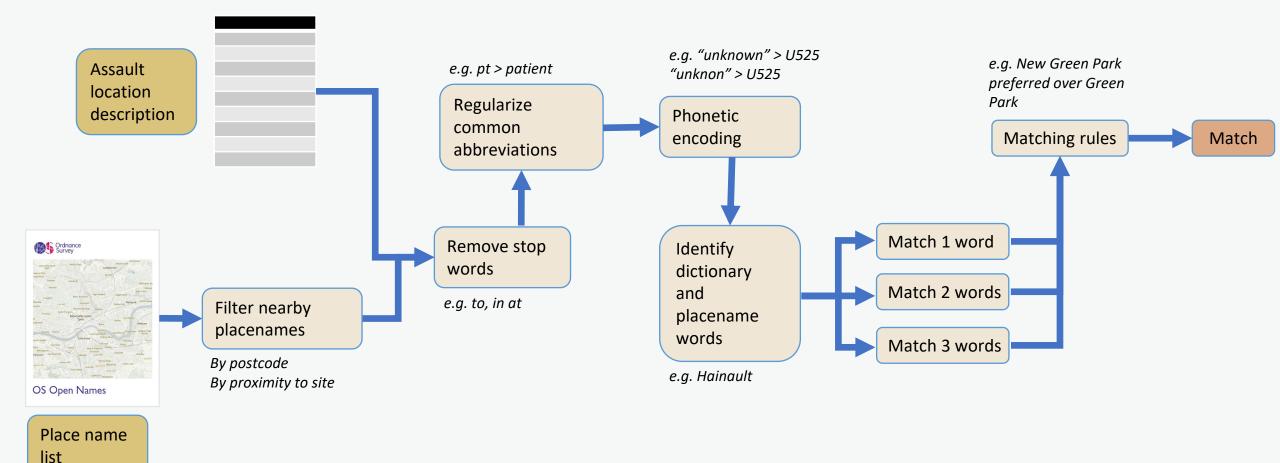

# Free text can be translated into points on a map – by an automated process

#### Street and place names can generally be identified

# Street and place names can generally be identified (in detail)

#### Assaults at home can be identified

Assault location description	Label
At pts home address	Home
On the street, near Blue Park	Not home
At boyfriends flat	Not home
Outside own front door	Home
Outside the Ram's Arms	Not home
Dunstable town centre	Not home

## Assaults at home can be identified by machine learning

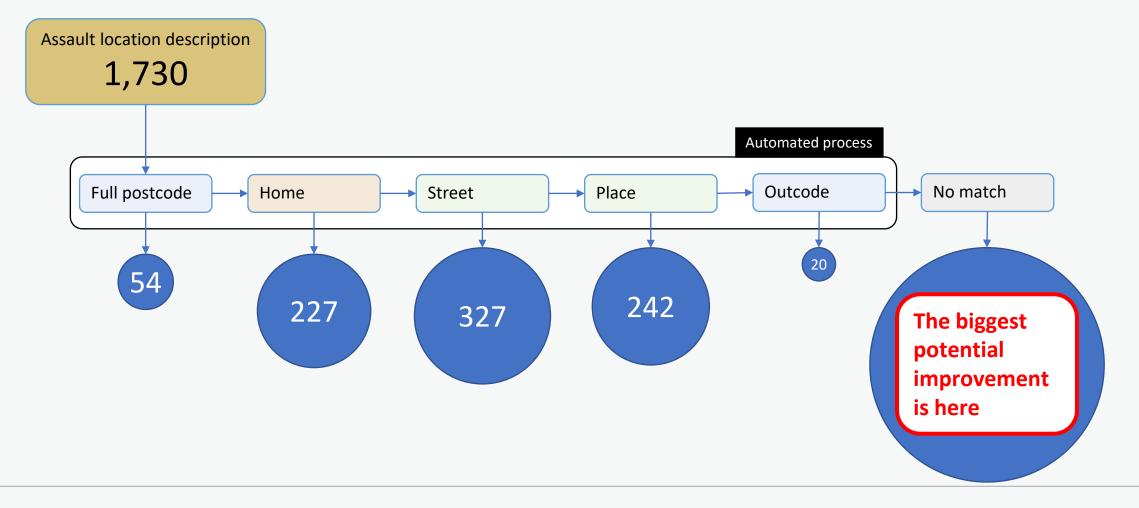

Accuracy: 96.82%

Manual lab

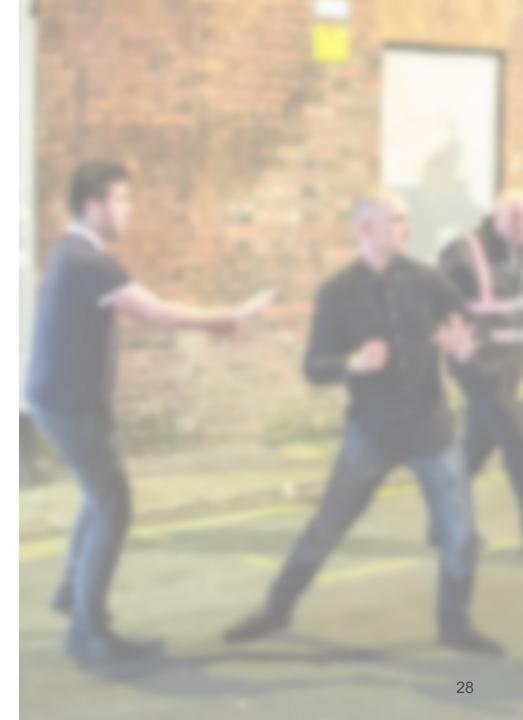

of historic a		i		
location		Reference labelled data		
description				
examples	Prediction	Home	Other location	
Model training	Home	206	23	,
	Other location	34	1,529	
			ault	Ĺ
			location	

# Combining approaches allows identification of most descriptions containing useable information

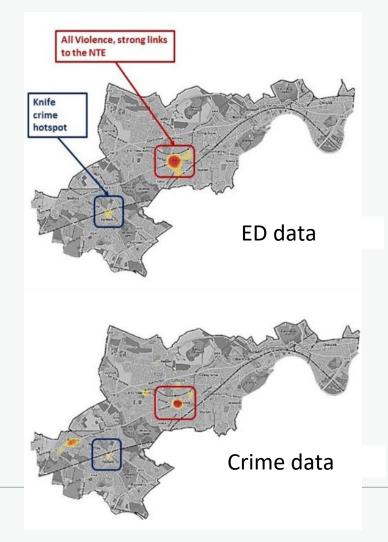

132 errors of which 100 were matches that were mapped to no- $m_{atch}^{\ell'}$  tch.

# Use and the future

## Effective violence reduction is informed by data

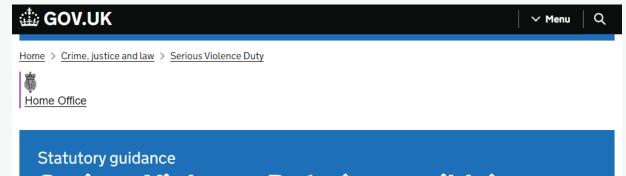

#### Hounslow, 2018: Operation Lambridge

Hospital Based Youth Worker evaluation

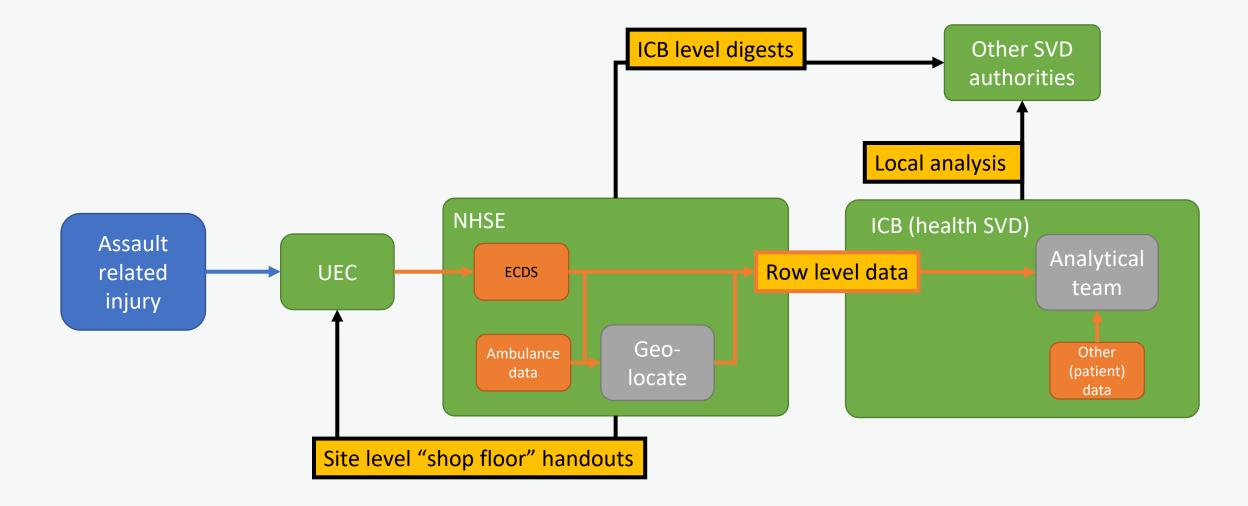

#### Serious Violence Duty Strategy & Needs Assessments

Serious Violence Duty (accessible)

Applies to England and Wales

## Future plans: ISTV and the Serious Violence Duty

## Conclusion

- ED has a unique and important view of violence
- Capturing ISTV in an ECDS compatible way makes all parts of the data much more available for a wide range of purposes.
  - ISTV
  - Surveillance
  - Population need
  - Evaluation
- Work driven by the Serious Violence Duty, will speed up the processing of ISTV and improve availability, useability and practical use of data.
- Effective collection cannot exist without champions in EDs
