

ARCP Outcomes broken down by characteristics

March 2025

The Royal College of Emergency Medicine (RCEM) is committed to fairer training cultures for all. As part of this commitment the Training Standards Committee (TSC) Quality Team have reviewed the ARCP outcome data for EM trainees for the time period April 2023 - April 2024. The ARCP outcomes have been reviewed against self-reported demographic data on protected characteristics. We have focused on intersectionality rather than singular protected characteristics to ensure a more meaningful review of the data.

The college is sharing this early initial data recognising that its contents indicate that we have more work to do to create a fairer training culture for all. Following the publication of this report the College will progress work on more cross-sectional analysis of this data, as well as comparisons to Exam performance.

RCEM is committed to supporting all our members and ensuring the highest standard of patient care through ongoing education and training.

This report presents the statistical significance and strength of relationships between ARCP outcomes and trainee characteristics. The analysis has been approached in the following way:

- Chi-Square Test for Independence: To test if there is a statistically significant association between ARCP outcomes and categorical characteristics (gender, ethnicity, PMQ, English as first language).
- Cramér's V: To measure the strength of association (effect size) between variables.
- Significance Threshold: p-value < 0.05 will indicate statistical significance.

Psychometric Summary of ARCP Outcomes by Characteristics

Characteristic	Chi-Square	p-value	Cramér's V (Effect Size)	Interpretation
Gender	61.56	<0.001	0.11	Statistically significant, small effect size
Ethnicity	62.95	<0.001	0.09	Statistically significant, small effect size
PMQ	56.56	<0.001	0.09	Statistically significant, small effect size
English as First Language	47.00	<0.001	0.10	Statistically significant, small effect size

Total distribution of Outcomes

Outcome	Total
Outcome 1&6	2069
Outcome 2	141
Outcome 3	158
Outcome 4	7
Total	2375

Total distribution of Outcomes

Distribution of outcomes by gender

Outcome	Female	%	Male	%	Others	%
Outcome 1& 6	925	87	1036	87	108	84
Outcome 2	67	7	68	6	6	4
Outcome 3	66	6	82	7	10	8

Total	1060	100	1186	100	129	100

**Distribution of outcomes by Gender -
Female**

**Distribution of outcomes by Gender -
Male**

Distribution of outcomes by Gender Others

A statistically significant association was found between the outcome and gender variables. The Cramer's V effect size of 0.11 indicates a weak relationship between the categories of the outcome and gender.

Distribution of outcomes by ethnicity

Outcome	Asian	%	Black	%	Mixed	%	White	%	Others	%
Outcome 1& 6	358	79	82	80	69	78	1259	90	301	88
Outcome 2	41	9	11	11	11	13	62	5	16	5
Outcome 3	48	11	9	9	8	9	72	5	21	6
Outcome 4	3	1	0	0	0	0	0	0	4	1
Total	450	100	102	100	88	100	1393	100	342	100

Distribution of Outcomes - Asian

Distribution of Outcomes - Black

Distribution of Outcomes - Mixed

Distribution of Outcomes - White

Distribution of Outcomes - Others

A statistically significant association was found between the outcome and ethnicity variables. The Cramer's V effect size of 0.09 indicates a weak relationship between the categories of the outcome and ethnicity.

Distribution of outcomes by PMQ

Outcome	UK	%	EU	%	IMG	%	Others	%
Outcome 1 & 6	1584	89	77	80	362	81	46	84
Outcome 2	96	6	5	5	39	9	1	2
Outcome 3	94	5	13	14	45	10	6	11
Outcome 4	3	0	1	1	1	0	2	3
Total	1777	100	96	100	447	100	55	100

Distribution of Outcomes by PMQ - UK

Distribution of Outcomes by PMQ - EU

Distribution of Outcomes by PMQ - IMG

Distribution of Outcomes by PMQ - Others

A statistically significant association was found between the outcome and PMQ variables. The Cramer's V effect size of 0.09 indicates a weak relationship between the categories of the outcome and PMQ.

Distribution of outcomes by English as 1st language

Outcome	Yes	%	No	%	Others	%
Outcome 1&6	1581	89	361	80	127	89
Outcome 2	97	5	42	9	2	1
Outcome 3	101	6	46	10	11	8
Outcome 4	2	0	2	1	3	2
Total	1781	100	451	100	143	100

Distribution of Candidates Outcome by English 1st Language - Yes

Distribution of Candidates Outcome by English 1st Language - No

Distribution of Candidates Outcome by English 1st Language - Others

A statistically significant association was found between the outcome and English 1st variables. The Cramer's V effect size of 0.10 indicates a weak relationship between the categories of the outcome and English 1st.

Intersectionality

This section examines ARCP outcomes by gender in combination with ethnicity, PMQ, and English as a first language. Due to the small number of cases (129) where gender was identified as 'Other,' these have been excluded from the breakdowns as they did not allow for meaningful analysis.

Distribution of outcomes by female/ethnicity

Outcome	Asian	%	Outcome	Black	%	Outcome	Mixed	%	Outcome	White	%	Outcome	Others	%
Outcome 1 & 6	122	80	Outcome 1 & 6	20	66	Outcome 1 & 6	34	81	Outcome 1 & 6	635	90	Outcome 1 & 6	114	91
